Abstract (en)

[origin: EP2298514A1] The method involves inserting the length of food in a cutting device having a rotating knife. The cut slices are deposited for forming a portion on the intermediate storage area (15). Multiple slices are delivered to a conveying unit (14), with which the slices are discharged. A shingled slice arrangement is produced from the cut slices in the intermediate storage area. An independent claim is also included for a device for cutting a length of food into slices.
