Abstract (en)

[origin: EP2298983A1] A hinge (1) for the door of electrical household appliances, particularly for hinging the door of dishwashers, comprising a coupling element (2), which can be fixed to the body of the appliance, and a supporting element (3), which can be fixed to the door and is hinged to the coupling element (2) about a main axis, the hinge further comprising an element (5) for connecting the supporting element (3) to elastic means (6) that contrast the rotation of the supporting element (3) with respect to the coupling element (2) in the direction of rotation that corresponds to the opening rotation of the door with respect to the appliance, and further comprising friction means (7) which are interposed between the connecting element (5) and the coupling element (2) in order to slow the rotation of the supporting element (3) with respect to the coupling element (2) about the main axis, the friction means (7) being connected to the coupling element (2) and engaging against two opposite faces of the connecting element (5).
