Abstract (en)
[origin: EP2299181A1] The appliance i.e. baking-oven (10), has a cooking chamber divider (36) arranged in a cooking chamber (12). A sensor unit (72) detects a parameter of the divider in a signal. A control unit (16) evaluates the signal. The control unit is changed from one operating mode to another operating mode based on the signal of the sensor unit. The control unit changes a characteristic of an operating unit (18) into an operating characteristic during change of the control unit from the former mode to the latter mode. The divider is adjustable in height by using a height-adjustment device (32).
