Abstract (en)
[origin: EP2299194A2] The system has a laminar intermediate element (7) i.e. intermediate base, provided in a housing, and a housing cover for closing the housing that accommodates an air conditioning system. Housing side surfaces laterally adjoin to an open side of the housing. The housing has multiple projections in an area on an inner side for arranging the intermediate element. The projections are arranged such that the projections form a groove for inserting the intermediate element. The intermediate element is held in a position in the groove, in the insertion condition.
