Abstract (en)
[origin: EP2299232A2] The heat exchanger has a collector with a base (4) extending in a longitudinal direction, and a fluid-tight manifold (5) of the collector. The fluid-tight manifold is fixed at the base. The base has an edge-sided structure for connection with the manifold. The manifold has a roof area (10) with a crown (11), where the roof area extends in a longitudinal direction. A flexible deformation of the roof area causes an increase in pressure in the collector. The manifold is made of plastic. The base is made of metal on aluminum base.
