Abstract (en)  
[origin: WO2010009263A1] Apparatus and methods for supporting a fluorescent lamp. The apparatus may include a ballast and one or more lamp holders. The lamp holders may be in electrical communication with the ballast via a conductor. One or more lamp holders may be removably attachable to the ballast. When a lamp holder is attached to the ballast, it may be attached in a manner that places the lamp holder in electrical communication with the conductor. The apparatus may include a lamp holder module that may support one or more lamp holders. When a lamp holder is attached to the lamp holder module, it may be attached in a manner that places the lamp holder in electrical communication with a conductor that is configured to distribute power to lamp holders that are attached to the lamp holder module.
