Abstract (en)  
[origin: WO2010000510A1] Control network for motor vehicles, having nodes (10) in the form of controllers (PSS, EH), sensors (R1, R2, U) and/or actuators (A1, A2) which are connected to one another and time-synchronized by a time-controlled bus (12), characterized in that each node (10) has a time reference system (14, 16) which is synchronized to the bus (12) and which indicates a global time which is common to all nodes, and in that at least one node has a time coordination system (18) which coordinates, for a plurality of actions which are to be performed by different nodes, the global times at which these actions are to be performed.
