Abstract (en)
[origin: EP2301375A1] A cover-type containing structure for flexible enclosures mainly includes a front cover sheet, a rear cover sheet, a connection portion and a flexible enclosure. The front cover sheet includes a first joining edge and a cover piece, whereas the rear cover sheet includes a cover assembly corresponding to the cover piece. The connection portion is located between the front cover sheet and the rear cover sheet to connect the two sheets. The flexible enclosure includes a second joining edge and by engaging the first joining edge with the second joining edge, the front cover sheet and the flexible enclosure are fixed. Besides, the containing structure further includes a holding portion. Under a contained state, the holding portion is used to contain smaller objects; whereas, in an unfolded state, in addition to that the flexible enclosure is used to contain larger objects, the holding portion can be used as well to contain smaller objects. In addition to applying to a bag-like product, the containing structure of the present can be also applied to contain other clothing combined with the bag-like product or other flexible enclosure.
