Abstract (en)

[origin: EP2301378A1] The dispenser (16) has an end piece (40) defining a product dispensing orifice that is opened opposite to a receiving surface located under the end piece. A protective unit (44) protects the dispensing orifice to hinder contact between a body surface of a user of the dispenser and the dispensing orifice, where the protective unit protrudes downward beyond the end piece. A passage opening is located opposite to and underneath the dispensing orifice in a predispensing position and a dispensing position. Independent claims are also included for the following: (1) a cosmetic product dispensing device comprising a cosmetic product container for fitting a dispenser (2) a method for dispensing a cosmetic product on a receiving surface.
