Abstract (en)

The present invention relates to an equipment 100 for vestibular stimulation and/or for the therapeutic treatment of neuromuscular dysfunctions and comprises a supporting structure 1 and a tilting or swinging element or pendulum 30 adapted to tilt and/or swing on a rotational axis 2a substantially horizontal. The equipment according to the present invention comprises moreover supporting and/or fixing means adapted to fix a person or user 14 (for instance a person with disabilities or affected by neuromuscular dysfunctions) to said tilting or swinging element 30 so that said person or user can be fixed to said tilting or swinging element 3 in a position in which said person or user appears to be lying supine on his own back on a plane substantially perpendicular to said rotational axis 2a.
