Abstract (en)

[origin: EP2301671A1] The bar (10) has a carrier element (12) including a fluid channel (20) with an input orifice (23), and a foil (13) connected with the carrier element in a position of use, where the foil includes a set of cylindrical nozzle openings (15) with a fluid entry opening (17) and a fluid exit opening (19). The nozzle openings are associated with the fluid channel of the carrier element. The fluid exit opening of the nozzle opening is formed inside a contour of the input orifice in the position of use.
