Abstract (en)
[origin: EP2301861A1] The device (10) has a slide valve (12) that is movable between two positions relative to a housing (11). A receiving surface is arranged for receiving two blades. The blades are conveyed from a storage position into a removal position by the movement of the valve between two positions. The blades are arranged in the receiving surface in the storage position and are arranged in removal seats (E1, E2) in the removal position. Safety units e.g. plates (31a, 31b), are arranged for completely covering an edge (36) of the blades in the removal position.
