Abstract (en)
[origin: EP2301880A1] The lifting device (1) has a connection assembly (11) e.g. pulley block, longitudinally adjustable by a manual or motor drive. The assembly includes a connection device formed as a clamping device (113) i.e. parallelogram guide device, for temporal connection to left and right guide rails (21l, 21r), and another connection device permanently or detachably connected with a lift cabin (2). The clamping device produces and/or reinforces clamping engagement with the guide rail by traction force acting on the clamping device over the assembly.
