Abstract (en)
[origin: EP2302158A2] The leaf frame profile (2) has a hollow chamber profile (5) comprising a stopper portion with gasket seals for sealing at a ground beam (3) and/or a frame profile. A recess (7) is formed in the stopper portion, and a sealing element (4) is arranged in the recess. The sealing element is pivotably supported in a closed position in which the sealing element is partially provided in the recess and in an opened position for sealing abutment on the ground beam or the frame profile. The hollow chamber profile is formed with two profile elements. An independent claim is also included for a door assembly comprising a sealing element connected with a control element.
