Abstract (en)

[origin: WO2010004095A1] The invention relates to a harvester for timber harvesting, which includes a frame (10) to be attached to the boom of a work machine, to which frame are fitted - a cutting device (11, 12), - a delimbing-blade arrangement (13), which includes one or more delimbing blades (13.1-13.3, 36), and - a feed device (25) equipped with rotating members (14) for delimbing a tree (22) using the delimbing-blade arrangement. The harvester includes pulsed-feed means (19, 30), which are arranged to be activated when a resistance according to a set criterion is detected in the feed device. In addition, the invention also relates to a method in timber harvesting using a harvester.
