Abstract (en)
[origin: WO2009153190A1] Device for issuing a product from a container, said device guaranteeing an ergonomic handling of containers of different sizes. To accomplish this, the device comprises a receptacle unit (200) for the container, said receptacle unit having a cavity (201), an advancing element (209) for discharging the product located within the receptacle unit (200) and a handle (100) connected to the receptacle unit (200), said handle having a metering unit (101), wherein the connection between the handle (100) and the receptacle unit (200) is detachable in order to guarantee exchangeability of the receptacle unit (200) and that a coupling section (108) of the handle (100) and a coupling section (207) of the receptacle unit (200) form a coupling in the attached condition of the receptacle unit (200) to the handle (100) in such a way that an operative connection is facilitated between the metering unit (101) of the handle (100) and the advancing element (209) in the receptacle unit (200).
