Abstract (en)  
[origin: WO2009077282A1] The invention relates to a wire spool, particularly for receiving saw wire during wire sawing, comprising a spool body having at least one attachment flange (2, 3) on a spool body front side. According to the invention, the spool body has a transverse division such that a rigid spool core (4) is enveloped by a spool casing (5) in the radial direction having elastic properties, wherein the spool casing comprises segments (7) that are supported against the spool core.
