Abstract (en)
[origin: WO2010009946A1] The invention relates to a rail vehicle comprising a floor plate (B), which is supported on a shell floor plate (B) with height adjustment elements (HE) therebetween, wherein the height adjustment elements (HE) comprise two components (OK, UK) arranged one over the other, of which the one rests against the floor plate (B) from below and the other rests against the shell floor plate (B) from above, wherein the two components (OK, UK) can be fixed in various positions relative to each other in order to set a total height of the height adjustment elements (HE).
