Abstract (en)
[origin: WO2010010500A1] A seawater suction system (10) and a method of its assembling is provided. The seawater suction system (10) comprises first and second conduits (12, 14) connected to one another, wherein the first conduit (12) is formed from at least two layers of a first material and the second conduit (14) is formed from a single layer of a second material which is different from the first material. The method of assembling the seawater suction hose (10) comprises the steps of providing at least one first conduit (12) and at least one second conduit (14), wherein the first conduit (12) is formed from at least two layers of a first material and the second conduit (14) is formed from a single layer of a second material which is different from the first material connecting the two conduits together; and connecting a suction head to a free end of the first conduit (12).
