Abstract (en)

[origin: WO2009153014A1] The invention relates to a method for filling dual-chamber systems (3) in pre-sterilizable carrier systems (1), which method comprises the following steps: making at least one washed, siliconized and sterilized dual-chamber system (3) available in a magazine (9), the dual-chamber system comprising respective separating elements separating the two chambers (5, 5') from each other, the magazine (9) accommodating at least one dual-chamber system (3) and being arranged in a container (11) that is sealed with a closing element (13); introducing the container (11) into a clean room; opening the container (11) and filling a first chamber (5) of the at least one dual-chamber system (3); closing the first chamber (5); filling a second chamber (5') of the at least one dual-chamber system (3); closing the second chamber (5'); removing the system from the clean room.
