Abstract (en)  
[origin: WO2010001425A1] A container made of bent cardboard and composed of a rectangular tunnel-shaped part (1) in which a drawer (7) is inserted said drawer having longitudinal walls glued to their respective inner walls (20,38,39,44) with a trapezoidal recess on the two shorter sides for fitting in complementary flaps present at the two sides of the front and rear inner walls of the drawer. The front wall of the drawer is greater than the span of the tunnel so preventing the drawer from penetrating beyond the rear opening of the tunnel, it being pulled out from the front due to the presence of two apertures (15,1S) making a finger- grip. The front wall forms part of a structure holding together the longitudinal walls of the drawer by means of two spacer flaps (48a, 49a) joined to the sides of the front inner wall (44), pressed against two windowed bands joined perpendicularly to their respective longitudinal walls of the drawer, and matching with the front wall on the inner side. A further two flaps (48b, 49b), coplanar with the first two, joined together as stated above on opposite sides, render the whole structure stable.
