Abstract (en)

[origin: WO2009144553A1] The bottle for containing injectable fluids, particularly medical, pharmaceutical, cosmetic products or the like, comprises a containment container (2) of an injectable fluid (3) having an access mouth (7), a closing element (8) that is at least partially inserted in the access mouth (7) and which has an area in penetrable material suitable for being crossed by an extracting element for the injectable fluid, and a protection plug (10) for protecting the closing element (8), which plug (10) comprises a cap (11) that can be placed to at least partially cover the closing element (8) and which has an opening for accessing the area in penetrable material, and a cover (16) that is associated with the cap (11) by interposition of rotation means (17) around a swinging axis and which supports a shutter element (18) that can be fitted sealed in the opening.
