Abstract (en)
[origin: WO2009141061A2] The invention relates to a container, in particular a large-volume container for receiving pressurised drinks, in particular a keg (1). The container is fitted with a filling head (3) which comprises a first channel (7), e.g. product channel (7), and a second channel (8), e.g. gas channel (8). Said container also comprises a pusher (4) that can be moved inside the filling head (3) and that defines separate flow paths for a product and a gas, in the inside the container and optionally, to the outside of the container. According to the invention, the pusher (4) is designed in such a manner that the flow paths of the gas and the product are interchangeable.
