Abstract (en)
[origin: WO2009152933A1] The invention relates to a textile machine (1) having a plurality of work stations (2) and at least one service unit (16) that can be moved along the work stations (2) for operating and/or maintaining the individual work stations (2), wherein the at least one service unit (16) comprises at least one camera (50), and wherein the camera (50) is designed to produce images that include components of the service unit (16) and/or the work stations (2) and to transmit them to a control unit (17, 6, 10) of the textile machine (1) for detecting and evaluating the components and/or the current absolute or relative positions thereof, said control unit using the information obtained for controlling the service unit (16) and/or the work station (2) requiring operation and/or control. The invention further relates to a method for operating a textile machine (1) of said kind.
