Abstract (en)

[origin: WO2009147042A1] The present invention relates to a cable loop box with a cable loop (20), comprising an elongated, tubular housing (10), wherein at least one of the ends of the housing is open, into said open end a cable eyelet (21), which is held in a position substantially deflected by 90° by a bracket support (30), can be inserted, said bracket support being separate from the housing (10), wherein the open end of the cable eyelet or the deflected ends (22) of the cable loop (20) protrude out from the open end (12) or from an opening (12a) of a bottom side (14) of the housing next to the end (12). According to the invention, it is proposed that the bracket support is a separate part separate from an end plug (15), said support able to be inserted into the housing and that the free cross section of the end not subject to load from the cable loop and the bracket support, and optionally a lateral housing opening proximate thereto, is sealed by the plug.
