Abstract (en)

[origin: CA2722801A1] The invention relates to a window (1) comprising a frame (2), wherein a sealing strip (3) made of an elastic, optionally, resilient foam is applied to the outer side of the window frame (2). The aim of the invention is to provide a window frame that is used to construct a window, a sealing strip made of an elastic resilient foam being applied to the outer side of said window frame that can be inserted in an advantageous manner during simple pre-assembly. The invention is characterised in that the foam is maintained in the compressed form on the window frame (2) by means of a holding part (4) and precompression can be released by destructive effects on said holding part (4) that is elastically prestressed in the direction of extension or that is made of a brittle material.
