Abstract (en)
[origin: WO2010012252A2] A continuous flow machine (1) having a multi-part housing (2) and having a rotor accommodated therein, wherein the housing is subdivided on a first plane (H) parallel to the rotor axis and on a second plane(V1, V2) at right angles to the rotor axis, is produced from a module system in which housing parts are selected from a plurality of different, prefabricated housing parts, selected housing parts are connected on one plane (V1, V2) of the first and second plane, and housing parts which are connected to one another on one of the first and second planes are then connected to a further selected housing part in the other (H) of the first and second planes.
