Abstract (en)
[origin: WO2009152985A1] The invention relates to a valve train device, particularly of an internal combustion engine, having an actuating device (10, 10a; 10b) that is provided to displace at least one axially displaceable cam element (11, 12, 11a, 12a; 11b, 12b), and which comprises a gear shifting gate (13a; 13b, 16) for displacing the cam element (11, 12, 11a, 12a; 11b, 12b), and at least one switchgear unit (13, 18, 22a, 23a) comprising a switch element (14, 19, 20a) and an actuator (15, 17, 55a), wherein the switch element (14, 19, 20a) is provided in order to engage into the gear shifting gate (13a; 13b, 16) at least in one switching position, and the actuator (15, 17, 55a) is provided in order to move the switch element (14, 19, 20a) into the switching position. The invention provides that the gear shifting gate (13a; 13b, 16) comprises at least one intermediate segment (14a-19a; 14b, 15b, 52-57) that is provided to terminate a switching action.
