Abstract (en)

[origin: WO2009151617A2] An information retrieval system is disclosed for digitally stored health information that can include a knowledge model operative to classify health information and a health profile input interface operative to receive a health profile from the user. The system can also include health profile storage responsive to the health profile input interface and operative to store the health profile, and access logic responsive to both the user health profile storage and the knowledge model and operative to access health information for the user based on both the health profile and the knowledge model.
