Abstract (en)

[origin: WO2010012492A1] 1. A switching strip profile for a switching strip for the detection of obstructions, and an apparatus for the detection of obstructions. 2.1. The invention relates to a switching strip profile for a switching strip for the detection of obstructions having a profiled body (18) composed of electrically non-conductive material, a first conductor (12) which is arranged in a rear area of the profiled body, seen in the detection direction, and having a second conductor (14, 42) which is arranged in a front area of the profiled body, seen in the detection direction. 2.2. According to the invention, seen in a cross section of the profile, the first conductor has two side surfaces (26, 28) which run essentially parallel to and at a short distance from a respective outer wall (38) of the profiled body, and, on its lower face which faces an attachment surface of the profile, the first conductor has U-like shape which is open towards the attachment surface. 2.3. Use, for example, for the protection of motor-operated motor-vehicle tailgates.
