Abstract (en)

[origin: WO2010009865A1] The invention relates to a device for processing a process product using a process medium, comprising a unit (12) for providing the process medium, and a transport unit. The transport unit has a transport element (24) that is configured in order to move the process product (10) along a process path between a receiving process of a receiving device and a handing over process of a handing over device, and in order to move from the receiving process to the handing over process of the process product (10). The process product enters the process medium (14) from the side, and is moved by the medium, or floats along on top of the process medium (14).
