Abstract (en)
[origin: WO2010009815A2] An improved plug connector (100, 200) is characterised by the following features: the electrical outer conductor contacting section of the outer conductor (113, 213) of the plug (100, 200) is designed to run separately in the radial direction from the axial stop, such that the high frequency signal path formed on the inner wall of the outer conductor (113, 213) between the outer conductor (113, 213) of the plug connector (100, 200) and a further outer conductor (213, 113) of a further plug connector (200, 100) for connection thereto runs over the electrical contacting device running in the radial direction and the mechanical action axial stop on the connector or plug side of the plug connector (100, 200) is provided outside the high frequency signal path provided by the radial contacting device.
