Abstract (en)

[origin: WO2010012417A1] The invention relates to a method for allocating an operating address to an operating device for luminous means, in which the operating address is transmitted to the operating device in digitally coded form via an interface which is configured to connect a light sensor. The operating address is allocated by a user using a handheld device to transmit optical digital signals to a light sensor or infrared sensor which is connected to the interface.
