Abstract (en)

The shoe (1) has a shaft (2) comprising an opening (6) at a rear side over an entire height, where the over-shoe is opened at a bottom side by absence of base not to cover a sole of a worn shoe or boot. The over shoe is adapted to form and size of a riding boot. An external lower edge (4) of the shaft passes till to the base. Closures (8) are arranged at the edge of the opening for closing the opening. The closures are designed as magnet closures or hook-and loop fasteners. The shaft is made of dimensionally stable material such as leather, rubber and plastic foil.

Abstract (de)

Die Erfindung betrifft einen Überschuh (Galosche) zum Schutz eines getragenen Schuhs oder Stiefels gegen Schmutz und Nässe, wobei er an seiner Unterseite durch Fehlen des Bodens offen ist, um die Sohle des getragenen Schuhs oder Stiefels nicht zu bedecken.
