Abstract (en)
[origin: EP2305357A1] The handle (1) has a support member (4) affixed to a body and projecting from a transverse wall of cylindrical body (2). The support member is arranged for receiving a support of thumb of a user holding the handle. The support member includes a modifying and locking unit for selectively modifying and locking a position of the support member with respect to the body. The support member vertically slides in a groove (23) arranged in the body. The body includes an opening (21) adapted for attachment of wrist-strap.
