Abstract (en)  
[origin: EP2305385A2] The mill has a mill work i.e. fluid and air damping attachment (7), fed above a milling material feeding system (5) and delivered above a discharge unit (6). A rotating cutter kit is arranged in the mill work and includes multiple cutters that are arranged in drive motors (2). The cutters include a circular of choppers that are held by cutting plates. The cutters are disc-likely formed, and an outer surface of the choppers is rest in right angle for a disk plane, where thickness of the cutter is 2 mm. The motors are directly connected with a housing (1) of the mill work.
