Abstract (en)

[origin: EP2305485A1] The method involves selectively assembling printed products and supplements (7, 8) along an assembling section (14) to form loose book blocks (9). Feeders (12) are arranged along the assembling section, and the printed products are fed to a circulating conveyor device (16) at regular intervals following receiving locations (15). The printed products are supplied as individual sheets and/or partial block stacks (4-6) to the receiving locations of the conveyor device by the feeders connected to a digital printing machine (1). An independent claim is also included for a device for manufacturing printed items e.g. book blocks, books, pamphlets and magazines.
