Abstract (en)

[origin: EP2305486A2] The device (51) has a pressing unit adapted to a form of a glued back (2a) of a book block (2). The pressing unit is designed as an elastic hollow body that is subjected with a pressure medium (56) e.g. air, where the hollow body is expandable. The hollow body is arranged centrically over the back of the book block and extends over the width of the back of the book block. The hollow body is designed as a pressing hose (53) that is arranged transverse or longitudinal to the back of the book block, where the hose is made of rubber or silicone.
