Abstract (en)

[origin: EP2305579A1] The bin (10) has a housing (16) for receiving disposable anti-odor element (18) and comprising an insertion end for inserting the anti-odor element. The housing has an ejection end for directly ejecting the anti-odor element, so that the simple insertion of the anti-odor element into the housing disposes the used element. The housing is configured for allowing passage of the air around the anti-odor element. The housing includes a guiding unit i.e. wall, for guiding the anti-odor element between the insertion and ejection ends by guiding rails.
