Abstract (en)

[origin: EP2305943A2] The arrangement has a head rail (2), a lower rail (4) and an intermediate rail (6) arranged between the head and lower rails. A curtain (8) is arranged between the lower and intermediate rails, and operating shafts (12, 12') are arranged in an area of the head rail. A safety coupling (40) is arranged between the shafts and connects the shafts with one another in a torque-proof manner in a blocking position with respect to a relative rotating direction, where the lower and intermediate rails are arranged at a minimum distance to each other in the blocking position.
