Abstract (en)

[origin: EP2305944A2] The assembly has a cloth hanging wound on a winding shaft. The shaft is rotatable within a lining. The cloth hanging is deflected by a round, rigid support element. The support element lies above a rotational axis of the shaft and engages at a lower side of the cloth hanging relative to a winding on the shaft. An angle of contact of the cloth hanging around the support element is less than 90 degree. The support element forms an upwardly pointing closure of a bottom blind of the lining. The lining supports the support element over an entire length.
