Abstract (en)
There is provided an exhaust gas treatment apparatus (1a) including: a tubular body (10) and a discharge electrode (12) disposed inside the tubular body (10). The tubular body (10) has a shape where an inner diameter of the tubular body (10) is gradually reduced in a predetermined range from a face (25) which contains a central point (24x) of generation of corona discharge (24) generated by the discharge electrode (12) and which is perpendicular to the flow passage toward the downstream side (44) of the flow passage.
