Abstract (en)
[origin: EP2306030A2] The valve has a stage operating as a pilot stage (1), and another stage operating as a power stage (2). The former stage includes a movable nozzle tube (10), which is guided by a torsion element i.e. torsion bar spring. An oil supply of the movable nozzle tube is integrated in the torsion element. The oil supply is arranged in a neutral fiber of the torsion element. The torsion element has an oil supply bore on one side and an additional bore on an opposite side. The torsion element is made of titanium, copper-beryllium alloy or steel.
