Abstract (en)
[origin: WO2010005139A1] A vacuum cleaner is provided. The vacuum cleaner includes a dust collection container for storing dusts, a compression member that is provided in the dust collection container to be capable of rotating in first and second directions, and a driving unit for rotating the compression member. The compression member rotates in a first space corresponding to a first angle range and at least a portion of the dusts are stored in a second space corresponding to a second angle range (360-first angle range).
