Abstract (en)
[origin: WO2010013975A2] The present invention provides a pharmaceutical composition for preventing or treating osteoporosis, comprising a benzamidine derivative or salt thereof and bisphosphonate for the purpose of using simultaneously, separately, or sequentially as active ingredients. As a prophylactic or therapeutic composition for osteoporosis, the combination treatment of the benzamidine derivative and the bisphosphonate compound exhibits excellent inhibitory effect on osteoclast differentiation than the total effect of each individual treatment, thereby being used for the prevention or treatment of osteoporosis.
