Abstract (en)  
[origin: WO2009156147A1] The invention relates to a device (10) for coating an elongated workpiece (20), particularly for painting or impregnating a joined wooden workpiece, having at least one nozzle (14) directed toward the workpiece (20), wherein the nozzle (14) is disposed on a holder (11) aligned substantially perpendicular to the workpiece longitudinal axis and being suspended in a frame (17), and preferably being disposed in a rotating assembly (12). The invention further comprises a method for coating an elongated, rod-shaped workpiece (20) and a system (40), comprising the device (10), and on which the method according to the invention can be carried out.
