Abstract (en)

[origin: WO2010000525A1] The invention relates to a device for triggering all air bags of a vehicle, and also to a control unit for generating a trigger signal for all air bags of a vehicle, and further to a system comprising said device and said control unit. The device comprises an ignition circuit trigger and also an energy reserve in order to trigger circuit breakers in an ignition circuit as a function of the trigger signal coming from the control unit and to use the energy from the energy reserve for deploying the deployment elements for the air bags. The control unit receives at least part of the energy supply from the device.
