Abstract (en)

[origin: WO2010006926A1] The invention relates to a method and a device for operating a railroad security system, comprising trackside devices for specific functions. In order to reduce the number of cable connections, control of a first trackside device is provided by a data telegram generated as required by a second trackside device, in particular a signal box (1; 10), said data telegram being transmitted wirelessly.
