Abstract (en)  
[origin: WO2010006628A1] A transport cover (10) for a plurality of parallelepiped containers (12) having at least one pair of opposed surfaces with each surface having a raised portion. Each container has a dispensing end (14), a base (16) opposite the dispensing end, opposed front and rear surfaces (18; 20) and opposed first and second side surfaces (22; 24). The dispensing end (14) is formed by folding over and securing first and second side flaps (26; 28) onto the opposed first and second side surfaces (22; 24), respectively, such that the first side flap (26) forms a first ridge (30) on the first side surface (22) and the second side flap (28) forms a second ridge (32) on the second side surface (24). The transport cover (10) has a base wall (34), opposed front and rear walls (36; 38) and opposed first and second side walls (40; 42). The front and rear walls and the first and second side walls extend substantially perpendicularly from the base wall and form an opening (44) for receiving the plurality of parallelepiped containers (12). The first and second side walls are provided with engagement elements (46; 48) for engaging the ridges (30; 32) of the containers to thereby lock the transport cover to the containers.
