Abstract (en)  
[origin: WO2010015519A1] The invention relates to a first opening safety (101) for mounting onto adhesive or correction rollers (201) for applying an adhesive or corrective film (206) onto a substrate (301) by way of an application device (203), wherein the first opening safety (101) extends at least partially over the application device (203) in the installed state and is disposed at least partially between the adhesive or correction film (206) and the substrate (301) in order to prevent application of the adhesive or correction film (206) onto the substrate (301) by way of the application device (203), and wherein the first opening safety (101) can be released from the adhesive or correction roller (201) for first time use of the adhesive or correction roller (101) so that the first opening safety (101) can be removed prior to the first time transfer of the adhesive or correction film (206) onto the substrate (301) by way of the application device (203). In this way, wrap-around packaging can be conserved and trial usage by users in sales areas can be eliminated.
